RoseSTATION

Standardized FNA workstation equipped to solve all potential on-site problems

Rapid On-Site Evaluation (ROSE) is a service that the cytopathology laboratory provides for patients and their physicians. The advantages of immediate on-site evaluation include assurance of fine needle aspiration (FNA) biopsy adequacy, the ability to triage the specimen, shorten the length of the procedure, help guide and direct the biopsy in real time, and overall assist in managing the patient's procedure with the performing clinician at the point of care.

ROSE service for FNA biopsy is a time-limited procedure which occurs while patients are subject to varying degrees of sedation and while they have endoscopes or large needles placed within the cavity or abdomen. As such, it is important to collect and deliver images as quickly as possible in the highest quality.* The challenge is that until now there has been no mobile dedicated unit/system to carry out ROSE on location. At time of call cytology personnel must assemble items that will be required and transport them to the on-site location with a mobile cart.

Developed from an original idea from Professor Mousa A. Al-Abadi the RoseSTATION is Milestone solution to arriving rapidly on-site with a standardized work platform containing all tools required to accomplish this important diagnostic task.

The RoseSTATION in your lab, ready to go

RoseSTATION

ALL-IN-ONE, MOBILE WORKSTATION FOR RAPID ON-SITE EVALUATION OF FNA CYTOLOGY

The first workstation specifically developed for highly professional, standardized, ROSE procedures.

Safe transport of complete, standardized, mobile workstation

RoseSTATION Advantages

- All-in-one standardized, mobile workstation
- All items required are always available on-site
- Highly professional impact
- Ergonomic work environment
- On board power supply
- Mobile, can serve different locations
- Functional even in locations without electrical power
- Self-contained LED lamp for poorly lit environments
- On board routine microscope with die-cast frame
- Built-in height adjustable stool
- Removable steel work trays for rapid loading and cleaning
- Steel support bracket for waste disposal container
- Fold-up work shelf for PC/Tablet
- Ergonomic microscope set up
- Wi-Fi camera (optional)

World's First
Standardized
FNA Workstation

Fully operational on-site

The RoseSTATION unique features

All-in-one

All items needed are always available to the operator to assure rapid turnaround time

Mobile

Always ready to go. Just disconnect power and drive to new location

Self supporting

UPS power supply allows operation of lamp, forced air dryer and microscope for up to 40 minutes in case of lack of power on-site.

Setting up flexibility

The RoseSTATION is delivered without consumable items or reagents.

Each laboratory will outfit the RoseSTATION with items required according to their own standard operating procedure for ROSE.

AISI 304 stainless steel cart

Removable work trays for easy loading and cleaning

Forced air dryer for standardized drying of slides

Two dedicated areas for sampling and staining with steel trays for easy cleaning

LED lamp for workbench illumination

Two large volume drawers to store items needed for the procedure

On board height adjustable stool for ergonomic work conditions

On board UPS power supply

Fold-up work shelf for PC

Steel support for waste disposal

Routine microscope die-cast frame, with high stability and ergonomics, for transmitted light observation.

Adjustable microscope sleigh for ergonomic movement forward-backward

Telecytology through Wi-Fi camera or mobile devices (optional)
