Sample Management: a new approach to Zero Formalin Exposure

Dear Sirs,

In today's labs, formaldehyde is the standard fixative for collecting and storing biospecimens for pathological examinations and diagnoses. Operators, from Operating Rooms to pathology departments, risk high levels of exposure to formaldehyde fumes. Therefore, hospital and clinic safety departments are required to adopt precautions to ensure the safety of their personnel.

This *educational webinar* demonstrates how operators in surgery rooms and in pathology labs can handle histology specimens in complete safety, with no exposure to fixative fumes. You will discover how Milestone "Zero Formalin Exposure" solution can revolutionize personnel **safety** with the elimination of formaldehyde from the OR to the Histology Lab, for a **healthier** working environment to provide accurate and reliable diagnoses.

May 2020
6

Time:
hrs 9.00am - 4.30pm
(GMT +02)

*Free admission,
limited spots available*

Join our Live Webinar on 6th May and see our products in action

Click on the below button and reserve your seat by registering to your preferred time session

**Register for
9.00 am (GMT +02)**

**Register for
4.30 pm (GMT +02)**

This date or time do not fit your agenda?

No problem! If you register to the event will automatically receive the recording in the following days.
